

## GERISK Consultoria, Treinamento e Participações Ltda

GERISK is a company with eight years of experience in the Brazilian market. Our services are related to Consulting, capacitation and training in Risk and Uncertainties Analysis and Mitigation; Technical and Economical Viability quantitative studies; Optimization, Revitalization and Decommissioning Studies and use of Industry 4.0; support in Suppliers Selection, Technical Qualification and Innovation Projects.

Usually we adopt part the content proposed by SAFETY SERIES 75-INSAG 4 “right attention at the right time” and in our studies we use a combination of three methods: a) Reliability Engineering: APR, APRI, HAZOP, AQR, FMEA, FMECA, G BowTie, LOPA and others risk analysis tools; b) Incident and Accident Investigations: historical mistakes and successes; c) Methods grounded on Barriers and Performance Goals Existence Philosophy: study of scenery, safeguards, solidary set of barriers.

We believe that Good Results do not just depend on chance. They are the result of Planning, Training and Capacitation, added to good Control and Monitoring. Other factors are the scenario, the Technical Knowledge, the management model and, *of course*, a bit of luck.

We work so that the company might become a reference in Risk Analysis. Our focus is the Oil and Gas E&P segment and our actions are based on the search for a Sustainable Development.
